Pseudocode

```
For case b take 3 inputs:
Start
Show Welcome message
                                   num1
Start of loop
                                   operator

    Show selection options

                                   num2
                                  Print result of calculation of; num1 operator num2

    Take selection input

                                    ex. num1 = 1, operator = "+", num2 = 2
• Execute input case ———
End of loop
                                     result = 3
Show program termination
                                     print 3
End
                                  For case x:
                                  Break;
                                  For every other case print:
                                  "This feature is not yet available"
```
